

# COLOUR IN OUR T.REX AUTOMOTOSAURUS

**THANK YOU!  
FOR SUPPORTING  
#GOGODISCOVER**

# DID YOU KNOW?

- T. rex lived during the late Cretaceous period, around 65 million years ago
- With 60 teeth up to 20cm long, their bite force was 3x stronger than an African lion
- They could reach a top speed of around 10 mph (about as fast as you can ride a bicycle)
- A scientist who studies dinosaurs is called a paleontologist

## AUTOMOTOSAURUS

There are lots of car parts on our T.rex. Try to find his numberplate!

## THE FUTURE

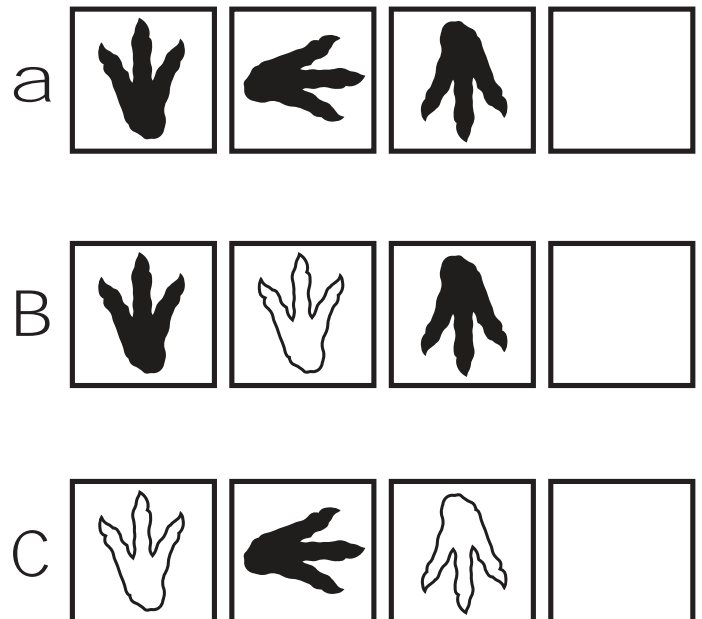

Cars are changing to be more environmentally-friendly. In the future you might learn to drive an electric car rather than one which runs on petrol or diesel.
